# MiSO3

The Technology Expense Management (TEM) Optimizer

Problem: Many organizations invest heavily in TEM solutions but do not fully utilize the data they provide. Their complexity often limits usage to finance departments and requires manual effort or costly consultants for most operational tasks. Additionally, the lengthy setup process can make switching to a new solution overwhelming.

The MiSO3 Solution

MiSO3 transforms your TEM data into actionable insights by automatically collecting and analyzing it with machine learning. It tracks changes, categorizes costs, and organizes data by facility, product, or renewal date. The platform seamlessly integrates with third-party applications to identify discrepancies and benchmark costs against market rates.

How it Works

Using the TEM Optimizer is as simple as creating a report in your TEM system. MiSO3 will automatically extract the report and handle the rest, providing you with the operational intelligence to better manage your vendor costs through automation.

Benefits of TEM Optimizer. Using technology, not headcount.

- Quickly view service commitments by term, location, and product category.
- Dramatically improve efficiencies without time-consuming system migrations.
- Actively benchmark costs against current vendor commitments.
